

WASPS

Wasps are a diverse group of insects with different forms of life. Some are eusocial and live in colonies, but most are solitary species. There are many families and subgroups of wasps in the world. In the Mediterranean region, the most important are the *cuckoo wasps* (Chrysididae), the *spider wasps* (Pompilidae), *Scoliidae*, *Sphecidae*, and the *vespids* (Vespidae).

IDENTIFY FLIES IN THE FIELD

- In general, wasps have a smooth body, without hair and with a thin waist, a characteristic that can serve to quickly differentiate them from bees.
- The shape and segmentation of the abdomen and the color patterns are important traits in differentiating wasp species.

FLY ANATOMY SIMPLIFIED

LIFE 4 POLLINATORS

The aim of the project is to improve pollinator conservation by creating a virtuous circle leading to a progressive change in practices across the Mediterranean region.

In Mediterranean countries (Spain, Italy, France and Greece) there is inadequate awareness about the role of wild pollinators and the importance of conserving their diversity. This knowledge gap is one of the main obstacles to proper planning of successful programmes to address the main drivers behind pollinator decline and ensure sustainable management and restoration of the remaining high-value pollinator habitats.

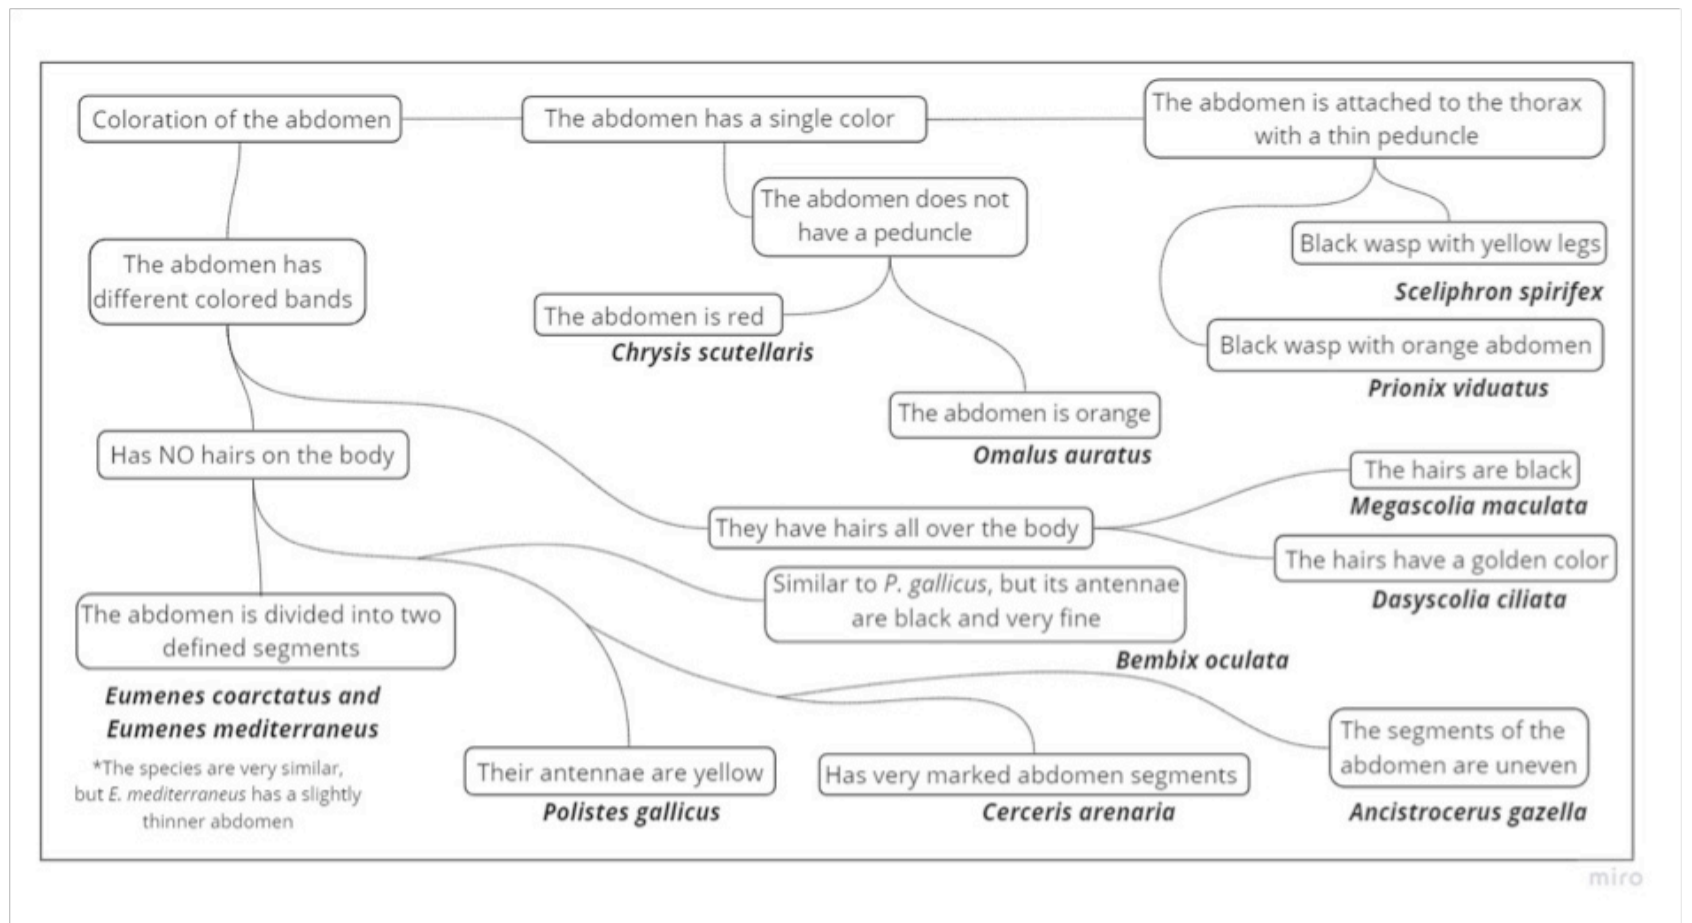

The project will contribute to a range of EU policy and legislation, including amongst others the biodiversity strategy, the pollinators initiative and biodiversity protection under the common agricultural policy.

POLLINATING INSECTS

IDENTIFICATION KEY

miro

WASPS

Megascolia maculata

largest wasp in Europe. It is characterized by its black color with four yellow spots on the abdomen and dark wings.

Females have yellow heads, are slightly larger and have shorter antennae than males.

DIMENSIONS: 20-40 mm

Dasycolia ciliata

medium-sized black wasp with many golden-colored hairs distributed almost all over the body, in the abdomen in bands.

Males have more yellowish hairs and shorter antennae.

grey wings

DIMENSIONS: 15-18 mm

Chrysis scutellaris

small wasp

greenish blue head and thorax and a red abdomen

DIMENSIONS: 6-9 mm

Omalus auratus

small wasp

metallic bluish thorax and bright orange abdomen

DIMENSIONS: 3-7 mm

Prionyx viduatus

Black wasp with a very thin peduncle on the abdomen, which is orange in color.

in the female the stinger is more visible.

DIMENSIONS: 20-25 mm

Sceliphron spirifex

Medium-sized wasp, black in color, with a very long yellow peduncle, as well as several bands on the legs.

in the female the stinger is more visible.

DIMENSIONS: 20-25 mm

Ancistrocerus gazella

Black and yellow wasp characterized by having an abdomen with uneven segments being the first ones larger and broader than those at the end.

DIMENSIONS: 11-18 mm

Bembix oculata

Similar to the common wasp, it differs from this by being smaller in size and small wings in proportion to the body.

antennae are black and very fine.

DIMENSIONS: 9 - 15 mm

Cerceris arenaria

Similar to *Polistes gallicus* specie but It is characterized to have very marked segments of the abdomen.

DIMENSIONS: 12 - 16 mm

Polistes gallicus

Very abundant wasp and known for building cellulose nests

The ends of the antennae are yellow.

DIMENSIONS: 10 - 16 mm

Eumenes coarctatus

The first segment of the abdomen is narrow and elongated.

DIMENSIONS: 6 - 15 mm

Eumenes mediterraneus

Very similar to *Eumenes coarctatus*, but with a thinner abdomen

DIMENSIONS: 6 - 15 mm
